# IP Wireless Telephones

### Overview

The Avaya 3616, 3620 and 3626 IP wireless telephones are designed for organisations that want the benefits of IP-based converged communications with the convenience of wireless communications. These streamlined, lightweight wireless phones connect to your office LAN, simplifying your communications infrastructure.

### Capabilities

Avaya 3616, 3620 and 3626 IP wireless telephones are designed to meet the needs of a wide range of busy office and commercial environments by delivering much of the functionality of a regular, wired desk phone. While away from your desk, you can place calls on hold, see incoming Caller ID, set up conference calls, and check for messages.

Industrial design addresses the day-to-day rigors of the mobile user while providing the features to work from anywhere. The 3616 is intended for general enterprise applications. The 3620 is designed for the demanding needs of the healthcare industry. The phone uses some of the most durable components in the industry, features an illuminated display, and comes with a warranty against breakage and liquid damage. The ruggedly designed 3626 wireless telephone is designed specifically for use in commercial workplace applications. It has a handset that has a rugged, monolithic design — users get a large earpiece to provide comfort and seal out background noise. The 3626 also includes a push-to-talk multi-channel feature for broadcast communications between employees.

The 3616, 3620 and 3626 wireless telephones support the following features:

- 2-line, 16-character handset liquid crystal display
- 4 hours talk time and 80 hours standby
- 802.11b standard-compatible
- Transmission type Direct Sequence Spread Spectrum (DSSS)
- Displayed operation modes indicating Talk, Ringer On/Off, Battery Low, and Message Waiting
- Fixed features keys: Hold, Transfer, Conference, and Redial
- Programmable keys to access features on the PBX
